## **FIELD WORK NOTIFICATION Transmission Systems Upgrades**

Dear valued customer,

We know you count on New York Electric and Gas Corporation (NYSEG) to provide you with the power you need, when you need it, and we take that responsibility seriously. As part of our commitment to provide safe, reliable service to all our customers, we are updating the delivery system in your area.

In a recent study of the transmission lines, it was determined that L956 needed an upgrade on the lines and structures to increase capacity and reliability. NYSEG is planning the rebuild of L956, which extends approximately three miles from the North Waverly Substation to the East Sayre Substation.

Crews will complete preliminary activities (vegetation management and removals) in April of 2025 in certain locations of the electrical line Right of Way (ROW) to help mitigate future outages created by tree issues. These activities help maintain the proper functioning of our network and our infrastructure within our Right of Way (ROW) and land parcels. (Please note, we will not be applying pesticides or herbicides as part of this effort.)

The construction work is scheduled to take place in June 2025 and conclude in December 2025, dependent on multiple conditions, which could impact the construction schedule. The construction activities will be conducted during regular business hours Monday through Friday with weekend work occurring only on an as needed basis.

At time of construction, you may expect single lane closures/slowed traffic, increased truck traffic/presence in the work areas, including daily traffic as crews travel between material staging and work areas.

Our Public Outreach team will be available to answer any questions regarding this letter or the project and can be reached at [outreach@nyseg.com](mailto:outreach@nyseg.com) or (833) 551-4200.

We thank you in advance for your continued patience, support, and flexibility during this upgrade process. We prioritize being a good neighbor and will collaborate with landowners, community leaders, and regulators throughout this upgrade process.

We look forward to working on this important project on behalf of our valued customers.

# Thermal Transfer - Line 956, North Waverly to East Sayre Substation

## Project Overview

As part of our commitment to provide safe, reliable service to all our customers, New York State Electric and Gas (NYSEG), in conjunction with our parent company – Avangrid, is updating the delivery system in our service areas. These upgrades comply with new electric transmission reliability requirements.

While making investments to meet the community's growing energy demands, we are working closely with our neighbors to ensure that all improvements are performed with minimal disruption to the environment and the communities we serve.

## Project Purpose and Need

In a recent study of the transmission lines, it was determined that Line 956 needed an upgrade on the lines and structures to increase capacity and reliability. NYSEG is planning the rebuild of L956, which extends approximately three miles from the North Waverly Substation to the East Sayre Substation.

## Project Scope Includes:

- Installing new conductor and fiber optic cables
- Installing 26 new steel pole structures
- Right-of-Way Clearing of vegetation

*Line 956 extends approximately 3 miles from NYSEG North Waverly Substation to the East Sayre Substation. Line 956 is located in the Town of Barton, Tioga County, NY and partially in East Sayre, Bradford County, PA.*

## Regional Benefits

- The upgrades will improve the reliability and resiliency of the entire transmission system, ensuring that the safe and reliable distribution of power is maintained.
- The upgraded transformer will enable the substation to meet the growing demand for additional power in the region.
- Modernization of the substation’s technological capabilities will provide critical redundancy options throughout the network.

## Project Location

Municipalities: Town of Barton,  
Tioga Co., NY;  
Bradford Co., PA

Permitting required: Q2 2025

## Estimated Timetable *(subject to change)*

Initial Field Work: Q2 2025

Construction Start: Q3 2025

In Service Date: Q4 2025

## Project Details

Crews will complete preliminary activities (vegetation management and removals) in April of 2025 in certain locations of the electrical line Right of Way (ROW) to help mitigate future outages created by tree issues. These activities help maintain the proper functioning of our network and our infrastructure within our ROW and land parcels. Please note, we will not be applying pesticides or herbicides as part of this effort.

Construction work is scheduled to begin in June and conclude in December 2025, dependent on multiple conditions which could impact the schedule. Most of the construction activities will be conducted during regular business (daylight) hours Monday through Friday with weekend work occurring only on an as needed basis.
